

Plan halaman khusus `seo.khusnudhoni.online`

Maksud yang benar: bukan menjadikan `seo.khusnudhoni.online` sebagai host planning/portfolio proposal. Ini adalah landing page khusus SEO seperti pola `ads.khusnudhoni.online` dan `web.khusnudhoni.online`.

- **Implemented locally.**

Route `/seo`, metadata SEO, sitemap entry, dan host rewrite sudah ditambahkan di repo.

- **Not live yet.**

Public DNS untuk `seo.khusnudhoni.online` masih kosong; Vercel custom domain juga perlu dipastikan.

Technical SEO

Local SEO

GSC quick wins

Content cluster

Strategic intent

Audience

Pemilik bisnis lokal, katalog/e-commerce, dan founder-led business yang butuh SEO praktis berbasis evidence.

Offer

Technical SEO, GSC opportunity mining, content cluster, local SEO/GBP, e-commerce catalog SEO, dan measurement system.

Differentiator

SEO diposisikan sebagai sistem: crawl/index foundation + demand mining + content + internal links + CTA/event tracking.

CTA

WhatsApp audit request: kirim domain dan goal, lalu mulai dari live evidence.

Page architecture

Hero

"SEO bukan sekadar artikel" + value proposition search demand → lead.

Outcomes

Low-hanging fruit, search foundation, SEO-to-leads measurement.

Services

6 service cards: audit, GSC mining, content cluster, local SEO, catalog SEO, measurement.

Process

Baseline evidence → opportunity model → implementation sprint → measure and compound.

Fit + Reporting

Client fit and weekly reporting rhythm for decisions.

FAQ + Final CTA

Clarify implementation-backed SEO and invite WhatsApp audit.

Implementation map

New route

`src/app/seo/page.tsx`

Dedicated SEO landing page with metadata, JSON-LD, sections, and CTA.

Host rewrite

`src/proxy.ts`

`seo.khusnudhoni.online` internally rewrites to `/seo`, matching the `web/fullstack` pattern.

Site profile

`src/data/site.ts`

Added `seoDomain` for metadata and sitemap source of truth.

Sitemap

`src/app/sitemap.ts`

Added SEO domain URL with priority 0.92.

QA evidence

- **Lint:** `npm run lint` PASS.
- **Build:** `npm run build` PASS; route `/seo` generated.
- **Local page:** `http://127.0.0.1:3030/seo` returns HTTP 200.
- **Host rewrite:** Host `seo.khusnudhoni.online` returns SEO page content.
- **Body markers:** "SEO Systems", "Technical SEO", "Start SEO audit", and SEO domain present.
- **Sitemap:** local sitemap contains `https://seo.khusnudhoni.online`.

Known warning: Next.js warns about multiple lockfiles and inferred workspace root. Build still succeeds.

Launch checklist

1. DNS Hostinger

Add A record: seo → 76.76.21.21, TTL 300/default. Current public DNS is empty.

2. Vercel domain

Run from repo: `HOME=/Users/wecik vercel domains add seo.khusnudhoni.online.`

3. Production deploy

Run: `HOME=/Users/wecik vercel deploy --prod`, or push after Git/Vercel policy is confirmed.

4. Live verification

Check DNS on system/1.1.1.1/8.8.8.8, HTTPS 200, Vercel matched path, body text, and mobile screenshot.

SEO guardrails

Domain intent separation

ads = growth/ads/tracking, web = fullstack/web development, seo = search-growth service.

Canonical clarity

SEO page canonical points to `https://seo.khusnudhoni.online`. Do not canonical it to root/ads.

Schema scope

Use `ProfessionalService/Person knowsAbout SEO`. Avoid client logos, guarantees, or fake ranking metrics.

Conversion measurement

CTA should later get explicit source tracking, e.g. `cta_source=seo_subdomain`, before promotion.

Acceptance criteria final

- `seo.khusnudhoni.online` resolves to Vercel and returns HTTPS 200.
- Header proves route is the SEO landing page, not the `ads/root` page.
- Live body contains SEO-specific service copy and CTA.
- Sitemap includes SEO domain and is reachable publicly.
- Mobile screenshot is readable in light and dark mode.
- Search Console property/sitemap is submitted after launch if indexing is desired.

- **Next action:**

Approve/perform deploy + DNS. After that, verify live and submit URL/sitemap for indexing.
